

# Flexible expertise & scalable delivery

The right specialists. Embedded. On demand.

## Overview

Extending specialist capability quickly and flexibly while retaining full control over delivery is essential for modern organisations. Access to experienced cloud, IT, and network expertise helps teams respond to architecture, design, automation and security challenges, adapt to changing demands and integrate additional skills seamlessly into existing ways of working.

That is why organisations turn to CACI. We solve the toughest challenges by working collaboratively, with an eye on the future and a relentless focus on quality, commitment, and delivering results. You gain specialists who strengthen your internal teams, close capability gaps, and keep priorities, outcomes, and delivery firmly in your hands.

Whether you are addressing short-term capacity pressures or supporting longer-running programmes, you gain the right expertise at the right time, embedded directly into your team.

## What you gain

CACI's delivery, cloud, IT, and network specialists extend your existing capability by embedding directly into your team, bringing the deep expertise, innovation and collaboration needed to progress work efficiently without outsourcing delivery. You retain full control over priorities, delivery, and outcomes, while we provide the specialist skills you need.

### Embedded specialist capability

Network and IT expertise aligned to your needs.

- Delivery Assurance
- Cloud & Infrastructure Engineering

This breadth of capability means you can support both business-as-usual operations and change initiatives without disruption.

## Skills, certifications & experience

You benefit from CACI consultants and engineers with industry-recognised multi-vendor certifications and experience aligned to complex, regulated and mission-critical environments, including. Delivery Assurance underpinned by recognised best practice such as Prince 2, Agile, Six Sigma and ITIL.

These credentials instil confidence that your network, cloud, and Infrastructure are designed and optimised to run securely while adhering to strict architectural, operational and security standards.

## Flexibility of delivery model

CACI's UK-based consultants and engineers can be supported by our offshore capability across IT solution consulting, network engineering, network security and automation to extend your capacity and accelerate your delivery.

This blended delivery model enables you to scale flexibly while maintaining strong governance, consistency, and quality, with full control retained by your team.

Your business can choose from a wide range of delivery models, outcome, fixed price, or T&M depending on your requirements.

### Ready to strengthen your team & scale delivery confidently?

CACI's experts have architected, designed, and delivered some of the UK's largest and most complex enterprise networks and IT environments. Organisations operating in secure, regulated and mission-critical settings trust us to reduce delivery risk and support long-term value, delivering on time and with minimal disruption.

Discuss your resource requirements with our specialists and explore how we can strengthen your team.
