

## CACI NetAssure

### Confident networks for resilient organisations

As the pace of digital transformation accelerates, your network infrastructure becomes more than a backbone, it's a business enabler. But complexity, misconfiguration, and a lack of visibility can turn your network into a source of risk and inefficiency.

**CACI NetAssure** is a vendor agnostic network assurance service designed to cut through that complexity. We combine advanced tooling with CACI's decades of expertise to transform how your network is managed.

This approach gives you full visibility, greater control, and reliable predictability across your environment. Instead of reacting to issues, you can focus on proactive optimisation that drives performance and resilience.

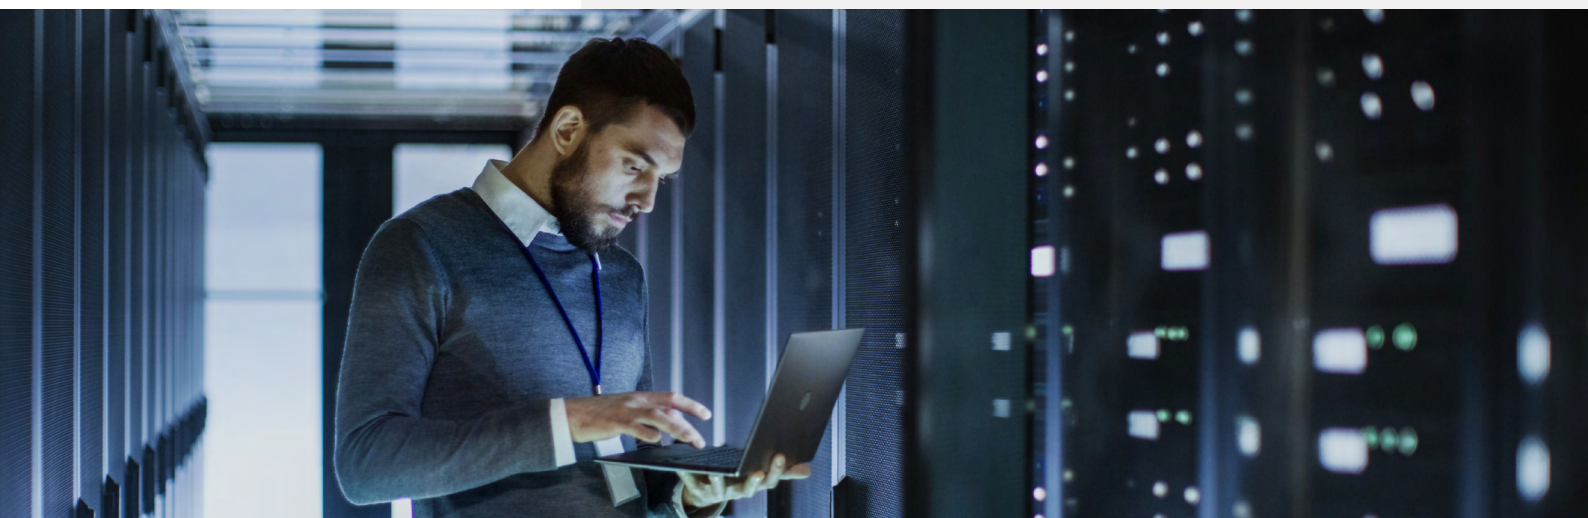

### Are network blind spots holding you back?

Today's networks grow fast, but often without structure. As a result, organisations are left with sprawling estates full of risk:

- Multiple vendors, tools and standards
- Out-of-date documentation and device sprawl
- Unidentified EoL/EoS assets and unmanaged risks
- Poor visibility of pre- and post-change network impact
- Regulatory requirements not being met

**If you're unsure about your network's resilience or struggle to spot weaknesses before they become problems, NetAssure gives you the clarity to see what's really happening and the stability to act with confidence.**

CACI NetAssure uses IP Fabric's advanced discovery and intent based analytics to deliver a real-time, accurate view of your network. It helps uncover hidden risks and validates your network design. It also ensures compliance and supports stronger, more resilient operations. All of this is accessible through a single, unified interface.

## Key service pillars

### 1. Discovery & visualisation

- Automated discovery of all IP-based network devices
- Live topology maps with cross technology dependency modelling
- CLI- and API-based data collection
- Interactive visualisation of routing, switching and policy flows

### 2. Advanced analytics & compliance

- 130+ out-of-the-box rules to validate network behaviour
- Highlight EoS/EoL, misconfiguration and CVE exposure
- Track pre- and post-change activity
- Automated compliance reporting for frameworks like NIS2, DORA, PCI DSS, and NIST

### 3. Stability & incident resolution

- Reduce MTTR with accurate inventory and root cause insight
- Historical digital snapshots for audit and rollback
- Ticketing system integration for operational alignment
- Standardised vendor-neutral data model for automation

## Business outcomes that matter

Gain greater network resilience with real-time insight, faster root cause identification, and more reliable change processes.

Stay ready for regulatory demands through automated compliance tracking that adapts to evolving frameworks and industry mandates.

Prepare your operations for the future by building a trusted foundation for automation, lifecycle management, and infrastructure planning.

## Why CACI?

With over 25 years of experience supporting central government, transport and enterprise networks, CACI brings a unique combination of engineering depth and consultative insight. We don't just collect data – we turn it into action.

NetAssure integrates seamlessly with **CACI's Network & Security Managed Services**, enabling us to take full ownership of your estate or support you in-house, with complete flexibility.

## Get in touch with our experts

If you're struggling to visualise your network, plan replacements or meet security standards, NetAssure is the first step to better.
