

CACI SecAssure

Transform your security infrastructure into a business enabler

Is your security infrastructure keeping up?

Modern networks are dynamic, multivendor, and critical to your operations. Over time, security configurations can drift, patches may be missed, and documentation often becomes outdated. These gaps create opportunities that attackers are quick to find and exploit.

CACI SecAssure quickly assesses your firewalls and overall network security to spot issues before they become problems. It identifies misconfigurations, vulnerabilities and compliance gaps to help you stay secure and compliant.

The CACI SecAssure solution

A suite of expert-delivered assessments and managed services underpinned by automated tooling, SecAssure ensures that you can:

- Achieve full visibility across your firewall estate with a complete, accurate inventory of policies, objects, and rules.
- Strengthen your security posture by validating configurations against best practice
- Address vulnerabilities faster with remediated, prioritised work packages that guide effective action.
- Stay protected over time with maintained assurance that adapts to change and emerging threats.

What is CACI SecAssure?

CACI SecAssure is a suite of expert delivered assessments and services underpinned by automated tooling. CACI SecAssure ensures:

Visibility & validation

- Instantly discover and catalogue your entire firewall estate with automated tooling that eliminates manual effort.
- Gain deeper rule base insights by identifying unused or overlapping firewall rules, insecure protocols, and missing descriptions.
- Ensure policy alignment by confirming firewall settings adhere to both industry standards and your internal security policies.

Hardening & remediation

- Tighten firewall policies and reduce risk with a clear optimisation roadmap to streamline rule sets.
- Reduce network vulnerabilities and potential attack surface, lowering the risk of cyberattacks.
- Implement changes confidently with CACI's professional network engineers through defined and prioritised work packages.

Continuous assurance

- Keep your security posture aligned with network growth through quarterly firewall assessment and annual penetration testing and vulnerability assessments.

Core offerings

Firewall assessment & optimisation

- Quickly ingest full firewall configurations across major platforms with automated discovery.
- Receive a concise optimisation report with executive insights and clear remediation steps.

Penetration & vulnerability testing

- Simulate real-world attacks on your perimeter and applications with external penetration testing.
- Identify misconfigurations and missing patches across servers, network devices, and cloud assets through internal vulnerability scanning.
- Receive a full test report with an executive overview, detailed findings, and clear mitigation guidance to strengthen your defences.

Cyber Essentials certification (optional)

- Complete a guided self-assessment and audit to meet Cyber Essentials certification requirements with Basic and Plus options.
- Close certification gaps efficiently with targeted remediation work packages tailored to your environment.

Why choose CACI SecAssure?

CACI SecAssure combines speed and scale through automated tooling that analyses thousands of firewall rules in seconds, eliminating weeks of manual effort. The service is vendor agnostic, supporting major firewall and security platforms, and backed by 25 years of deep expertise across sectors like Government, Finance, Transport, and Telecoms. Integrated assurance ensures seamless alignment with your existing Managed Security and Network Services for smooth handoff and ongoing protection.

Receive a concise optimisation report with executive insights and clear remediation steps.

Business outcomes you can measure

CACI SecAssure reduces risk by eliminating misconfigurations, and hardening firewall policies. Prioritised work packages accelerate remediation and ensure you become audit-ready for standards like NIST, PCI DSS, NIS2, and DORA. Streamlined rule bases optimise performance, while regular assessments drive continuous improvement as your network evolves.

Secure your network. Simplify your risk.
